

# Your school operations simplified.

Elimu Bora ERP is a Kenyan school management platform that brings the core work of running a school into one connected system built around Kenyan curriculum, payments, calendars and workflows so schools can spend less time managing administrative complexity and more time focused on education.

# At a Glance

## Elimu Bora ERP turns fragmented school operations into one connected system.

Elimu Bora ERP is a Kenyan school management platform built around the realities of Kenyan education. It brings academics, attendance, fees, payments, inventory, events, communication and student activities into one system, with access tailored to each person's role.

The platform is designed for schools running CBC, 8-4-4, or transitioning between the two, and it supports the Kenyan school calendar and M-Pesa-based fee collection.

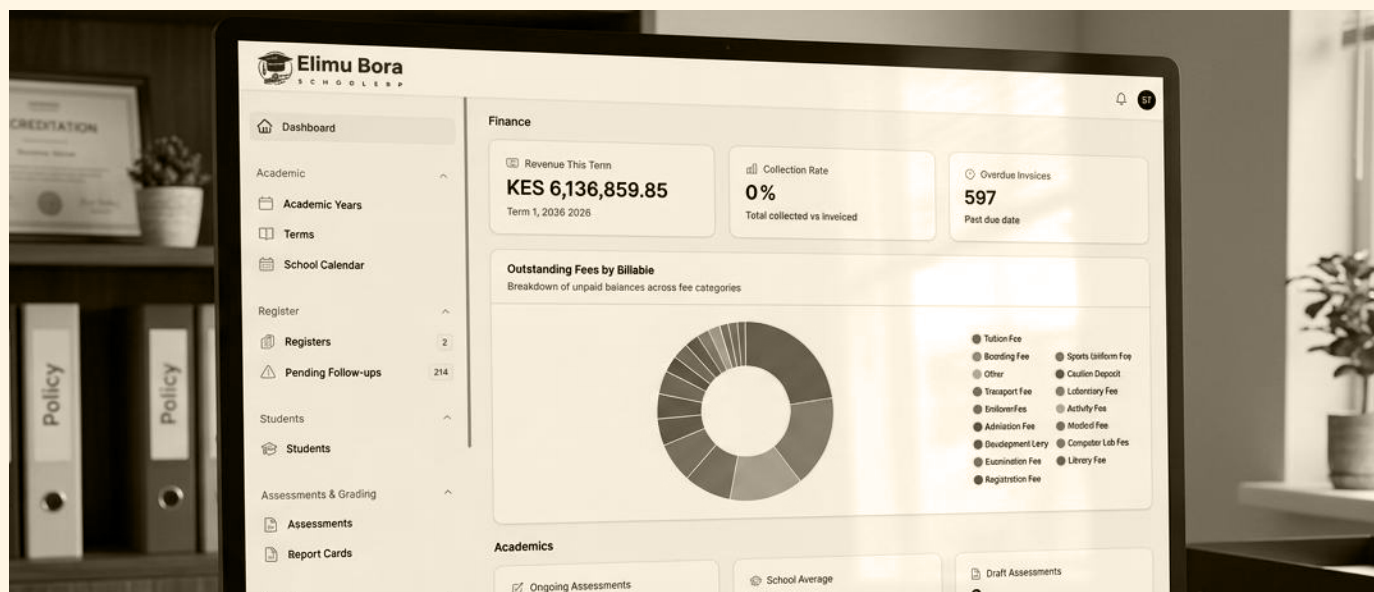

# Why We Exist

**Schools have enough complexity. Their software should reduce it.**

Running a school in Kenya often means moving between paper registers, spreadsheets, M-Pesa messages, documents and messaging apps just to answer everyday questions. *A fee payment needs to be matched to a student. Attendance needs to be confirmed. Grades need to become report cards. Parents need timely answers.*

These are not isolated administrative tasks. They are connected pieces of the same school operation, but when the information is fragmented, staff spend valuable time moving data from one place to another and leaders have less visibility than they should.

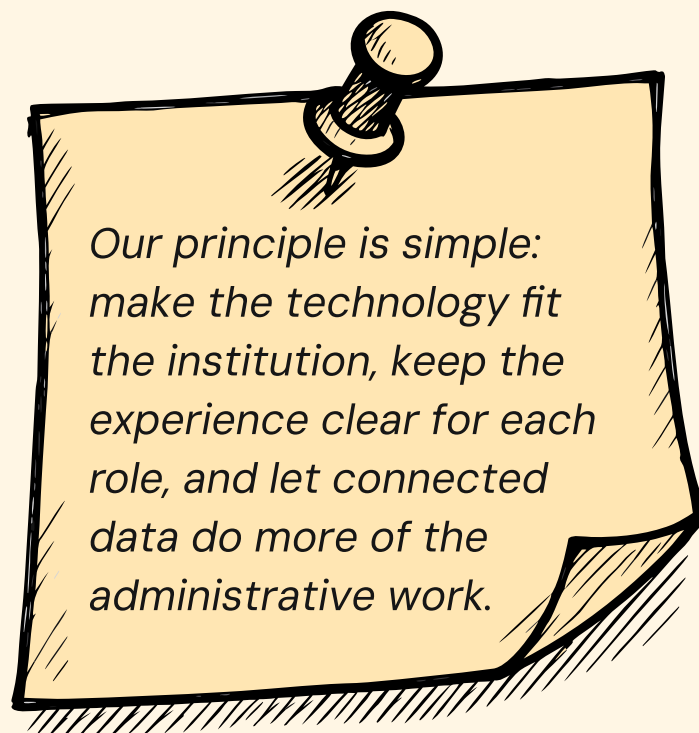

Elimu Bora ERP exists to change that. We bring the core work of running a school into one connected platform so schools can spend less time managing paperwork and more time managing what matters: teaching, learning, students and the people who support them.

# What We Believe

Technology should adapt to the school, not the other way around.

We believe good school software starts with an understanding of how schools actually operate. That means the curriculum, calendar, payment methods, roles, approvals and everyday workflows are not edge cases. They are the foundation of the product.

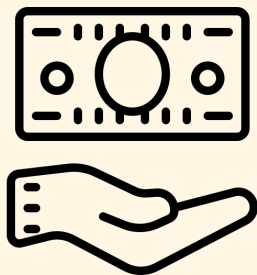

That is why Elimu Bora ERP was built around Kenyan school operations from the start rather than taking a system designed elsewhere and simply adding local integrations.

# Built for Kenya

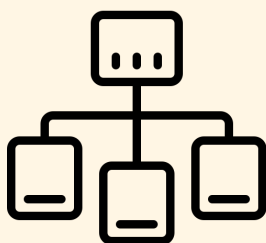

Local context is part of the product, not a marketing layer.

**CBC and 8-4-4:** Schools can model grade structures, subjects, pathways, grading scales and report cards for either curriculum, including schools transitioning between systems.

**M-Pesa payments:** Fee collection supports STK Push and customer-to-business payments, with transactions matched to student accounts so the school has a clearer payment trail and less manual reconciliation.

**The Kenyan school calendar:** Academic years, terms, assessments, attendance and recurring fee cycles are anchored to the school calendar so the platform behaves in step with the term.

**Kenyan school workflows:** From admissions and staff records to procurement, attendance, parent access and audit trails, the platform is designed around the operational realities of schools in Kenya,

# The Platform

## One school. One connected system.

Elimu Bora ERP is organised into 13 modules that work together rather than behaving like separate applications.

### Academic

Curriculum & Structure;  
Academic Years & Terms;  
Assessments & Report Cards;  
Timetable & Lessons

### Administration

Users & Identity; Attendance;  
Communication; Events; Activity  
Log

### Finance & Operations

Finance & Fee Management;  
Inventory & Procurement

### Student Life

Sports & Games; Clubs &  
Societies

The result is a shared operational picture: changes to school structure can flow into related modules; payments update financial records, attendance can trigger guardian notifications, published assessments become part of the student record, and administrative actions remain auditable.

# For Every Stakeholder

The same platform, with the right view for each person.

**School leaders** get a school-wide view of fees, attendance, assessments, operations and other key information without waiting for separate reports.

**Teachers** can manage the work closest to the classroom; attendance, assessments, grades, timetables and student records – without seeing or changing information outside their role.

**Bursars and administrators** can manage fees, payments, procurement, records and school operations from structured workflows instead of disconnected files.

**Parents and guardians** have a dedicated view of their own children, including attendance, report cards, invoices, payments, events and other relevant school information.

**Students** remain at the centre of the record. Their academic, attendance and co-curricular information stays connected across the system.

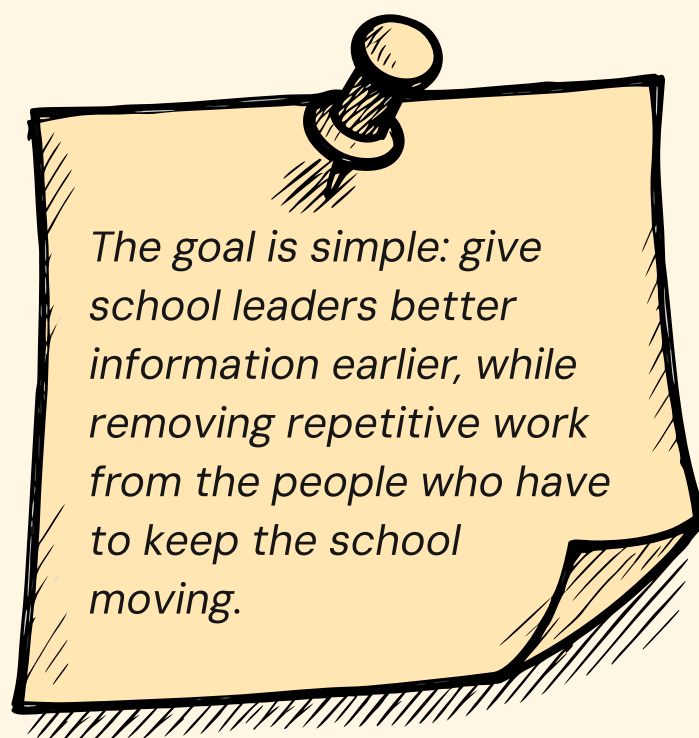

# From Admin Work to Better Visibility

The value is not just digitisation. It is what the school can now see and do.

**Before:** Staff search across registers, spreadsheets, messages and separate applications to build a picture of what is happening.

**With Elimu Bora ERP:** The underlying records are connected, updates are captured in the system, and authorised users can see the information relevant to their role.

That can mean faster attendance follow-up, clearer fee status, quicker report preparation, fewer duplicated entries, better stock visibility, and less time spent reconciling information at the end of the day or term.

# Finance & Operations

**Give the school office the same level of visibility as the classroom.**

**Fee management:** Set fee structures, generate invoices, track pending and paid balances, and maintain a complete payment history.

**M-Pesa:** Let parents pay through familiar mobile channels while keeping transactions connected to student accounts.

**Student wallets:** Support credits and debits for day-to-day student charges and balances where the school uses them.

**Inventory:** Maintain a live record of products, stock movements, reorder levels and low-stock alerts.

**Procurement:** Move requisitions and purchase orders into a structured approval trail instead of relying on verbal requests and scattered records.

**Auditability:** Significant actions across the platform can be traced by user and time through the activity log.

# A Better Parent Experience

**The school relationship does not end at the administration office.**

For parents and guardians, the most useful technology is not a complicated dashboard. It is timely, trustworthy access to the information that affects their child.

Through the guardian experience, authorised users can see their children's attendance records, report cards, invoices and payments, events, wallet balances and participation in clubs or teams.

When academic results are published, the guardian can access the record without waiting for a paper handover.

For families, the promise is clarity: fewer unanswered questions and a more connected relationship with the school.

# Trust, Security & Data

**Schools should know where their data lives and who can access it.**

Elimu Bora ERP treats student, guardian, financial and academic information as sensitive operational data.

- Each school is provisioned in its own tenant environment so its records remain separated from other schools.
- Role-based permissions control what different users can see and do.
- Data is transmitted over encrypted connections.
- School data is not used for advertising or sold to third parties.
- Automated backups are maintained, with the Terms of Service specifying a minimum 30-day retention period.
- The platform is operated in the context of Kenyan data protection requirements, including the Kenya Data Protection Act, 2019.

Our approach is straightforward: the school owns and relies on its data, and the platform should make that trust visible through separation, access control, auditability and responsible handling.

# Implementation Without the Usual Pain

Going digital should not become another project for the school to manage alone.

Elimu Bora ERP is designed to help schools move from their existing processes into the platform with guided onboarding.

1. **Discover** – Understand the school, its structure and its immediate priorities.
2. **Configure** – Set up the school profile, curriculum, classes, streams, fees and roles.
3. **Migrate** – Import existing student and staff information so the school can start with an organised system.
4. **Train** – Provide role-based guidance for leadership, teachers, bursars and administrators.
5. **Go live** – Move daily workflows into the platform and keep support close during the transition.

The aim is not simply to give the school access to software. It is to help the school adopt a better way of working.

# Who We Serve

## A focused product for the realities of Kenyan schools.

Elimu Bora ERP is designed for Kenyan schools of different sizes and levels of digital maturity – from schools still relying heavily on paper and spreadsheets to schools looking to consolidate several disconnected tools.

**For a school beginning its digital journey:** Elimu Bora provides a structured starting point for records, academics, fees, attendance and communication.

**For a school replacing fragmented tools:** it provides one connected system instead of asking staff to maintain several separate sources of truth.

**For a school replacing a foreign or poorly localised system:** it provides a platform designed around Kenyan curriculum, payments and school operations

# Where We Are Going

The next step is not more screens. It is more useful intelligence.

The platform is live today, and the direction is clear: make school operations increasingly connected, automated and useful to decision-makers.

**AI-powered insights:** We are building toward a platform that can surface meaningful patterns across attendance, academic performance and fees instead of requiring school leaders to export spreadsheets and analyse them manually.

**More payment options:** The roadmap includes expanding beyond M-Pesa to additional payment channels from Kenyan banks.

**eTIMS integration:** We are working toward automated tax reconciliation so schools can reduce duplicated data entry between school finance workflows and tax reporting.

Over time, the ambition is to move from a system that records what happened to a system that helps schools understand what is happening, and what they should pay attention to next.

Your school operations simplified.
